

## CLAIMS

What is claimed is:

5           1. A method for speeding up founding establishment through Internet, said method comprising:

          providing an electronic hub system capable of communicating with at least a resource provider;

          communicating said resource provider with said electronic hub  
10   system;

          examining a plurality of items of said resource provider;

          saving a record of said resource provider in said electronic hub system; and

          matching said resource provider according to said record of said  
15   resource provider.

          2. The method according to claim 1 further comprising establishing an electronic contract of said resource provider.

20           3. The method according to claim 1, wherein said electronic hub system comprises an electronic hub and a data storage device.

          4. The method according to claim 3, wherein said data storage device comprises a plurality of databases built therein.

25           5. The method according to claim 4, wherein said databases

comprise:

a resource database and said record of said resource provider saved therein;

5 a certified resource database having said record of said resource provider certified with said items;

a business model database having a plurality of business models of enterprises; and

10 a plan database having at least a business plan combined said record of said resource provider with said business models of enterprises.

6. The method according to claim 5, wherein said matching step comprises:

15 combining said resource provider with at least a certified provider from said certified resource database according to said business plans;

forming a plurality of match combinations for said resource provider;

comparing said match combinations with said business models from said business model database; and

20 defining a priority of said business plan according to said matching combinations and said business models.

7. The method according to claim 1, wherein said resource provider comprises a capital provider.

25

8. The method according to claim 1, wherein said resource

provider comprises a provider of administrative idea.

9. The method according to claim 1, wherein said resource provider comprises a technology group.

5

10. The method according to claim 1, wherein said resource provider comprises a management group.

10 11. The method according to claim 1, wherein said items comprises an official document related to said resource provider.

12. The method according to claim 1, wherein said record comprises a resource provider's class.

15 13. The method according to claim 1, wherein said record comprises a resource provider's scope.

14. The method according to claim 1, wherein said communicating step comprises:

20 logging in said electronic hub system;  
selecting a class for said resource provider;  
selecting a scope for said resource provider;  
assigning an identification number to said resource provider; and  
saving said record of said resource provider in said electronic  
25 hub system.

15. The method according to claim 1, wherein said examining step comprises:

examining said items of said resource provider;

certifying said resource provider according to examining said  
5 items; and

saving said record of said resource provider in said electronic hub system.

16. A method for reducing cycle time of founding establishment  
10 with electronic commerce, said method comprising:

providing an electronic hub system;

registering said electronic hub system;

saving a resource provider in a resource database of said  
electronic hub system;

15 examining a plurality of items of said resource provider;

saving a record of said resource provider in a certified resource  
database of said electronic hub system; and

matching said resource provider in said certified resource  
database according to said record of said resource provider.

20

17. The method according to claim 16 further comprising  
establishing an electronic contract of said resource provider in said  
certified resource database.

25 18. The method according to claim 16, wherein said electronic  
hub system further comprises an electronic hub.

19. The method according to claim 16, wherein said electronic hub system further comprises:

5 a business model database having a plurality of business models of enterprises; and

a plan database having at least a business plan combined said record of said resource provider with said business models of enterprises.

10 20. The method according to claim 19, wherein said matching step comprises:

combining said resource provider with at least a certified provider from said certified resource database according to said business plans;

15 forming a plurality of match combinations for said resource provider;

comparing said match combinations with said business models from said business model database; and

defining a priority of said business plan according to said matching combinations and said business models.

20

21. The method according to claim 16, wherein said resource provider comprises a capital collector.

22. The method according to claim 16, wherein said resource  
25 provider comprises an offices-building owner.

23. The method according to claim 16, wherein said items comprises a bank record related to said resource provider.

24. The method according to claim 16, wherein said registering step comprises:

logging in said electronic hub system;  
selecting a class for said resource provider;  
selecting a scope for said resource provider;  
assigning an identification number to said resource provider; and  
saving said record of said resource provider in said resource database.

25. The method according to claim 16, wherein said examining step comprises:

examining said items of said resource provider;  
certifying said resource provider according to examining said items; and  
saving said record of said resource provider in said certified resource database.

26. A system for speeding up an establishment's foundation through Internet, said system comprising:

a data storage device having a plurality of databases built therein;  
and  
an electronic hub connected to said data storage device through

computer program, said electronic hub cooperated with said data storage device whereby is capable to:

communicate with a resource provider;

examine a plurality of items of said resource provider;

5 save a record of said resource provider; and

match said resource provider according to said record of said resource provider and whereby speeds up said establishment's foundation.

10 27. The system of claim 26, wherein said electronic hub is further capable to establish an electronic contract of said resource provider.

28. The system of claim 26, wherein said plurality of databases comprise:

15 a resource database for registering said resource provider;

a certified resource database having said record of said resource provider certified with said items;

a business model database having a plurality of business models of enterprises; and

20 a plan database having at least a business plan combined said record of said resource provider with said business models of enterprises.

25 29. The system of claim 28, wherein said electronic hub is further capable to:

combine said resource provider with at least a certified provider

from said certified resource database according to said business plans;  
form a plurality of match combinations for said resource  
provider;  
compare said match combinations with said business models  
5 from said business model database; and  
define a priority of said business plan according to said matching  
combinations and said business models.

30. The system of claim 28, wherein said electronic hub is  
10 further capable to:  
log in said electronic hub for said resource provider;  
select a class for said resource provider;  
select a scope for said resource provider;  
assign an identification number to said resource provider; and  
15 save said record of said resource provider in said resource  
database.

31. The system of claim 28, wherein said electronic hub is further  
capable to:  
20 examine said items of said resource provider;  
certify said resource provider according to examining said items;  
and  
save said resource provider in said certified resource database.

32. The system of claim 26, wherein said electronic hub  
25 comprises a web server.

33. A system for speeding up an establishment's foundation through Internet, said system comprising:

5 a data storage device having at least a resource database, a certified database, a business model database, and a plan database; and

an electronic hub connected to said data storage device through computer program, said electronic hub cooperated with said data storage device whereby is capable to:

register in said electronic hub;

10 save a resource provider in a resource database;

examine a plurality of items of said resource provider;

save a record of said resource provider in a certified resource database; and

15 match said resource provider in said certified resource database according to said record of said resource provider and whereby speeds up said establishment's foundation.

34. The system of claim 33, wherein said electronic hub is further capable to establish an electronic contract of said resource provider.

20

35. The system of claim 33, whereby said electronic hub comprises a web server.

36. The system of claim 33, wherein said resource provider  
25 comprises a capital provider.

37. The system of claim 34, wherein said resource provider comprises a technology group.

38. The system of claim 34, wherein said resource provider  
5 comprises a management group.

39. The system of claim 34, wherein said items comprises said resource provider's a bank record.
